High-Level System Architecture:-

```
        +-----------------------------+
        |   Frontend (Next.js)    |
        |   (Client-Side App)     |
        +-----------------------------+
            |
            | (HTTP Requests)
            v
      +-----------------------------+
      |   Node.js (Express.js)   | <--- API Layer (RESTful API)
      |   (Backend Server)       |
      +-----------------------------+
          |
          | (API calls)
          v
   +---------------------------+        +--------------------------------+
   |  MongoDB (NoSQL)  |        |  Sanity CMS (Content)    |
   |  (Orders Data, User)  | <----> |  (Product, Category,      |
   |  (Data storage)       |        |  Content Pages, Reviews)|
   +---------------------------+        +--------------------------------+
          |
          | (Payments)
          v
   +----------------------------------+
   | Stripe/PayPal (Payments) |
   +----------------------------------+
```

```
                |
                | (Third-Party Integrations)
                v
    +--------------------------------+
    |  Third-Party APIs              |
    | (e.g., Shipment Tracking)      |
    +--------------------------------+
```
